Mental illness is a major problem in our society. There are not a sufficient number of Providers, facilities and other resources to properly care for those affected; this is especially true for persons living in rural and remote areas. Also, many Veterans returning from combat have not been able to receive proper mental health care. The use of technology would be a great help in improving access to mental health Providers and services. Telecare LLC offers mental health Providers the option and the ability to provide, and Patients/Clients to receive, mental health services in the privacy of their home from any device that allows them access to the Internet.

Telecare LLC
1501 Oakland Avenue, Suite D
Millville, New Jersey 08332-0009

“Any society that does not properly care for its Veterans, Elderly, Disabled, and Infirmed, violates a fundamental obligation of humanity.”

Dr. J. Theodore Brown Jr.
CONCEPT

Telecare LLC was originally conceived with the purpose of creating a new standard of care to serve the healthcare needs of disabled Veterans. As an afterthought, we realized that if the “standard of care” we established was extended to other special needs groups, it would help improve the quality of health care for society at large.

TELECARE PRIMARY OBJECTIVES

Telecare’s primary objective is to create an integrated, virtual, technology enhanced model of health care that facilitates communication between health care Providers and their Recipients.

Telecare LLC believes that home care is the future of health care. We believe this is especially true for:

- Disabled Veterans
- Persons Affected by Mental Illness
- Persons Affected by Substance Abuse
- The Elderly, Disabled
- Persons with Chronic Illness
- Children with Special Needs
- Persons restricted from receiving proper health care due to weather, limited transportation and those living in remote/rural areas.

TELECARE LLC MENTAL HEALTH SERVICES

Telecare LLC uses technology and innovative products to provide a unique array of home programs such as:

- Electronic Health Record Intake
- Mental Health Evaluation & Diagnosis
- Medication & Prescription Monitoring
- Audio Visual Conferencing
- Audio Visual Recording
- Specialty Referral & Consultation
- Education and Training
- Emergency Consultation & Support

TELECARE BENEFITS FOR PATIENTS
